

- A diagnosis of carcinoma that has spread from the primary site to another major organ of the body (metastasis)
- Cancer that has responded to treatment, but has since recurred and will require a new treatment plan

### **ACQUIRED IMMUNODEFICIENCY SYNDROME (AIDS)**

This must be documented by physical examination and laboratory findings.

HIV Positive and diagnosed by a physician as having AIDS based on the patient's having a disease indicative of AIDS or a T-helper/inducer lymphocyte (T-cell **CD4**) count under 400.

Some common indicator diseases are: pneumocystis carinii, kaposi's sarcoma, bacterial infections, HIV encephalopathy **and** lymphoma of the brain.
