Program Objectives

This day and a half program provides course content that will enable the physician, nurse, or health care professional to recognize and discuss the diagnosis, treatment and management strategies necessary to successfully provide patient care and promote community health. This continuing education activity will advocate best practices for care delivery community safety.

By attending this program, participants should be able to:

- List important infectious diseases and their relevance to clinical medicine and public health in the United States
- Cite biological research advances and issues
- Review processes and control issues related to local and state communicable disease epidemiology and control programs
- Debate the socioeconomic and sociocultural dynamics of communicable diseases
- Describe immunization practices/schedules for all age groups
- Identify relationships between communicable diseases and common cancers
- Discuss communicable disease prevention, treatment and control strategies
- Debate future communicable disease trends and issues
- Discuss new and emerging zoonotic diseases
