Boil Water Advisory Issued For Portions of Barboursville, Salt Rock, Milton and West Hamlin in Cabell and Lincoln counties

CHARLESTON, W.Va. (Feb. 12, 2010) – West Virginia American Water has issued a precautionary boil water advisory for customers in portions of Barboursville, Salt Rock, Milton and West Hamlin in Cabell and Lincoln counties. The affected area, which will be detailed below, is mostly residential.

This advisory follows a water main break that drained a tank serving the area. West Virginia American Water crews have already restored water service to most of the affected customers and should have service restored to the others, located on Malcolm Road, shortly.

Affected customers should boil their water before consumption until further notice. Customers are asked to bring water used for drinking, cooking, bathing and brushing teeth to a full boil for a minimum of one minute, then cool before use.

Boiling kills bacteria and other organisms that may be present in the water. West Virginia American Water also recommends the following steps:

- Throw away beverages and ice cubes if made with tap water;
- Keep boiled water in the refrigerator for drinking;
- Provide pets with boiled water after cooling;
- Do not use home filtering devices in place of boiling or using bottled water; most home water filters will not provide adequate protection from microorganisms;
- Use only boiled water to treat minor injuries.

Once the system recovers, West Virginia American Water will be collecting additional water quality samples in the area of the outage. For more information, contact West Virginia American Water's customer service center at 1-800-685-8660.
